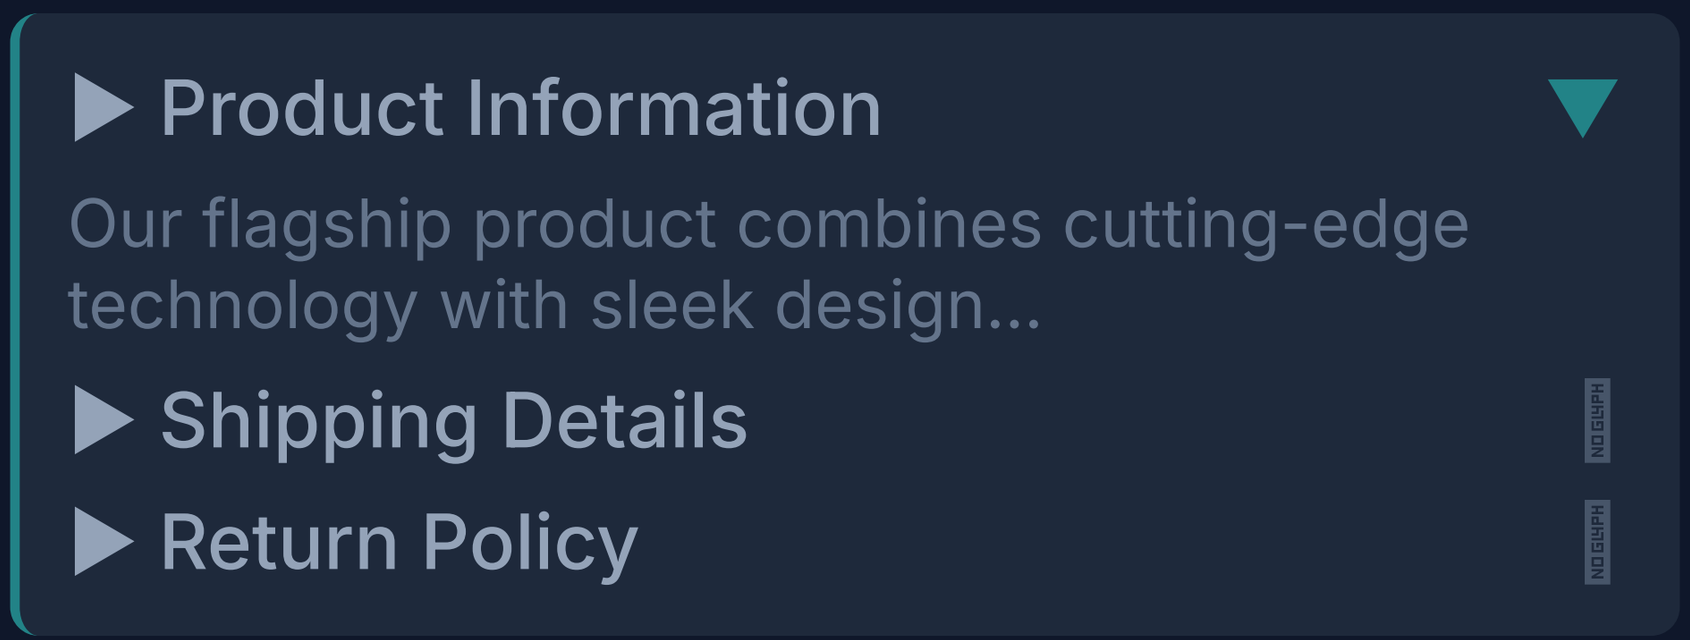
TWD + SHADCN/UI

Testing shadcn Components?



Swipe to learn how →

The problem with UI testing...

- ✗ Tests break on every refactor
- ✗ No real browser interaction
- ✗ Can't see what you're testing
- ✗ Slow feedback loops

INTRODUCING

TWD

Test While Developing

Your App

[Accordion Component]

TWD Sidebar ✓

Tests run here
in real browser

Tests run next to your app as you develop

The Test Code

```
await twd.visit('/accordion');

const btn = await screenDom
  .findByRole('button',
  { name: 'Product Information' });

twd.should(btn,
  'have.attr', 'aria-expanded', 'true');

await userEvent.click(btn);
```

Real browser queries · Real user events · Real assertions

What this test verifies

- ✓ Accordion renders correctly
- ✓ First item expanded by default
- ✓ Click expands another item
- ✓ Only one item open at a time

All verified in the real browser — instant feedback as you code

Try TWD Today

```
$ npm install twd-js
```
