TWD + SHADCN/UI

Testing shadcn Select?

Swipe to learn how →

The problem with UI testing...

- ✗ Tests break on every refactor
- ✗ No real browser interaction
- ✗ Can't see what you're testing
- ✗ Slow feedback loops

INTRODUCING

TWD

Test While Developing

Your App

[Select Component]

TWD Sidebar ✓

Tests run here
in real browser

Tests run next to your app as you develop

The Test Code

Real browser queries · Real user events · Real assertions

```
const sel = await screenDom
  .findByRole('combobox',
  { name: 'Select a fruit' });

await userEvent.click(sel);

// Portal-rendered options!
const opt = await screenDomGlobal
  .findByRole('option',
  { name: 'Apple' });

await userEvent.click(opt);

twd.should(sel,
  'have.text', 'Apple');
```

What this test verifies

- ✓ Select renders as combobox
- ✓ Click opens the dropdown
- ✓ Portal options are queryable
- ✓ Selected value updates correctly

All verified in the real browser — instant feedback as you code

Try TWD Today

```
$ npm install twd-js
```
